

Three Dimensional Paper Stars

Adapted from Susan Breen Silvy's 3D Star Template www.susanbreensilvy.com

I made my Zentangle 3D paper stars from standard white card stock and scored the folds with a tiny, ball -type burnishing tool.

1. Score all lines on the back side of the paper, using a ruler for accuracy, then cut out the star.
2. Carefully fold the dashed line scores toward you (create a mountain). Fold the solid lines away from you (create a valley) to get a three dimensional effect.
3. Flip the star and tangle on the blank side with your favorite pens.
4. Punch a small hole in the star with a craft needle and add a cord or hook for hanging.

Happy Holidays!
